DETAILED ACTION

1. This is in response to applicant's amendment and response filed November 4, 2004, in which claims 4-5,7-8,17-18, and 20-21 have been canceled and claims 1-3,6,9-16,19, and 22-34 are pending.
2. After further search and thorough examination of the present application and in view of applicant amendment and response, claims 1-3,6,9-16,19,22-34 are found to be in condition for allowance.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: Jalali et al (US 6,154,659) teaches the symbol energy to noise density is estimated over a specified duration and the estimate compares to a target E_s/N_0 value and if the measured E_s/N_0 is greater than target and radiotelephone sends a power down command over a received power control signaling channel to the base station (abstract).

On the other hand, the present application specifically teaches a first circuit coupled to the demodulator for receiving the demodulated PCB, the first circuit determining a noise variation of the demodulated PCB from the perpendicular noise component; a second circuit coupled to the demodulator and the first circuit, the second circuit providing an estimate of the power value of the PCB by eliminating the noise variance of the perpendicular noise component from the demodulated PCB, and an estimator coupled to the first circuit and the second circuit, the estimator calculating the

ratio of the power value estimate and the noise variance. These limitations, in conjunction with all other limitation of the independent claim, have not been disclosed, taught or made obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
